ABSTRACT

Online shopping or e-shopping is a form of electronic commerce which allows customers to directly buy goods and services from a seller on the internet using different web browsers. The evolution of online shopping has opened the door for a chance to provide a competitive advantage over firms. Online shopping has grown in popularity over the years mainly because people find it convenient at the comfort of their houses or workplace. Thus, the study examines the customer satisfaction towards online shopping from FLIPKART. The study focuses on online shopper's preferences, satisfaction levels and problems on Flipkart online shopping marketers. The study is based on primary data. Random Sampling method was used in this study for selecting the samples and the sample size for the study was 70. Research findings from the study will be useful for understanding the customers' level of satisfaction on basis of the products and websites experienced by customers. We have taken the help of structured questionnaire for doing this study. Here in this study we have tried to find out why people choose Flipkart and that if the respondents know about its new and innovative offers and services that it provides.

Key Words: Online shopping, e-shopping, flipkart, customer satisfaction, e-commerce

INTRODUCTION

It is difficult to imagine that a small company can completely transform the way we do shopping. But that's what Flipkart has beautifully done. In 2007, E-commerce was still considered a distinct segment business and most of the Indians did their shopping offline. Two software engineers in India, **Sachin Bansal and Binny Bansal** noticed the changing dynamics of technology and realized the potential of E-commerce. While there were only 50 million internet users in India at that point of time, they knew that with smartphone coming into the picture, it was only a matter of time when more Indians would be connected to the internet. They wanted to exploit this chance to make an internet shopping platform that would take India's shopping experience to a completely different level.

Right now, India has over 760 million internet users, and the number of individuals shopping online has increased exponentially. What started as a two-man mission to make India's most trusted online shopping platform has transformed into Flipkart, which is India's leading E-commerce platform which offers a list of 80 million products across 80 categories to nearly 200 million customers.

LITERATURE REVIEW

According to Mohanapriya.s "Online shopping has grown in popularity over the years mainly because people find it convenient from the comfort of their home or office. One of the most enticing factor about online shopping is popularity during a holiday season, it alleviates the need to wait in long lines or search from store to store for a particular item. The main scope of the study is to know about customer satisfaction towards online shopping. The present study reveals about reasons for preferring an online website and satisfaction towards online websites". According to Mohanapriya.s "Online shopping has grown in popularity over the years mainly because people find it convenient from the comfort of their home or office. One of the most enticing factor about online shopping is popularity during a holiday season, it alleviates the need to wait in long lines or search from store to store for a particular item. The main scope of the study is to know about customer satisfaction towards online shopping. The present study reveals about reasons for preferring an online website and satisfaction towards online websites".

The term – “E-commerce” has been specified as the conduct of commercial, government based and person specific activities with the assistance of electronic mediums and broadcast communications networks that includes a wide assortment of exercises from sharing to searching sharing of information, data or any specific value based exchanges which is of worth for the concerned parties involved. (E. Chan, and P. M. C. Swatman, 1999)

By the commercial based activities one means exercises related purchasing and selling of goods and services and subsequently even the banking transactions through the internet medium that keeps up client relationship without any kind of face to face interaction. (D. L. Hoffman, and T. P. Novak, 1998; F. Riggins, and S. Rhee, 1998; P. M. C. Swatman, 1996)

The customer's readiness and inclination for embracing the Internet as their shopping medium was likewise emphatically identified with their income, family size, and innovativeness. (Sultan and Henrichs, 2000)

Consumers, everywhere on the world, are progressively moving from the crowded brick and mortar marketplace to the single click virtual market spaces. In any case, despite the comfort offered, web based shopping has to go a long way from being the most favored type of shopping in India. Based on a study, it has been observed that ease and saving of time drive Indian shoppers to shop on the web; while security and protection concerns deter them from doing as such. (Vijay, Sai. T. & Balaji, M. S., 2009)

The researcher in one of the study on Consumer's Buying behavior towards online shopping has showed the inclination of most of the internet users towards online shopping and especially for apparels. (Prashant Singh, 2014).

Organizations are presently utilizing the Internet to construct close relationships within purchasers and advertising accomplices. Other than contending in conventional marketplaces, they are currently moving towards new dynamic virtual market spaces. Besides, through the Internet, shoppers can find out about the various attributes, ordering methods and payment modes for goods and services, which is possible without venturing out from home and followed by the marvels of expedited service, they can get their buys in brief timeframe. From augmented reality shows that test new items to online virtual stores that sell them, the innovation blast is influencing each part of advertising. The Internet has now become a really worldwide marvel (Srisuwan and Barnes, 2008; Teng et al., 2007).

Objective of the Study

- To evaluate the satisfaction level of the online customers on account of factors that drive customers for online shopping.
- To analyze the respondent's perception about online shopping.
- To find out whether the opinion of customers with regard to different factors that drive them for online shopping is same.

Research Methodology

This research is based on a survey made online. A structured questionnaire was used for data collection. An online survey was conducted through Google forms. The questionnaire was designed to analyze the respondent's perception about online shopping in Bhubaneswar. 146 respondents from various localities of Bhubaneswar were selected as sample. Data is analyzed by simple percentage analysis and chi-square analysis in MS-Excel.

Data Analysis

Customer satisfaction is the estimation of how the needs and responses get together and are delivered to transcend customer expectation. It can only be achieved if the customer has a comprehensive good relationship with the supplier. In the present day's competitive business marketplace, customer satisfaction is a predominant performance exponent and basic distinguisher of business strategies. Hence, the more the customer satisfaction, the more is the business and the connect with the customer.

Customer satisfaction is one of the part of a customer's experience that reveals a supplier's actions on customer's expectation. It also depends on how competently it is managed and how punctually services are provided. This satisfaction could be related to different business features like marketing, product manufacturing, engineering, quality of products and the services, responses to the customer's problems and questions, accomplishment of project, post delivery services, complaint management and many more.

Customer satisfaction is the all inclusive crux of the impression about the supplier by the customers. This impression which a customer makes with respect to the supplier is the gross total of all the process he/she goes through, right from liaising supplier before doing any marketing to post delivery options and services and managing all kinds of questions or complaints post-delivery. During this process the customer comes across working conditions of different departments and the type of strategies involved in the company. This helps the consumers to make a firm judgment about the supplier which eventually results in satisfaction or disappointment.

Table: 1 Demographic Statistics of the Respondents

Variables	Categories	Number of Respondents and percentage	Percentage
Age	18-30	80	54.79
	31-40	44	30.14
	41-55	22	15.07
Total		146	

Table -1 depicts number of respondents and percentage of respondents belonging to different categories of respondents on the basis of age. The maximum number of respondents belongs to the age group of 18-30 which is 55%.

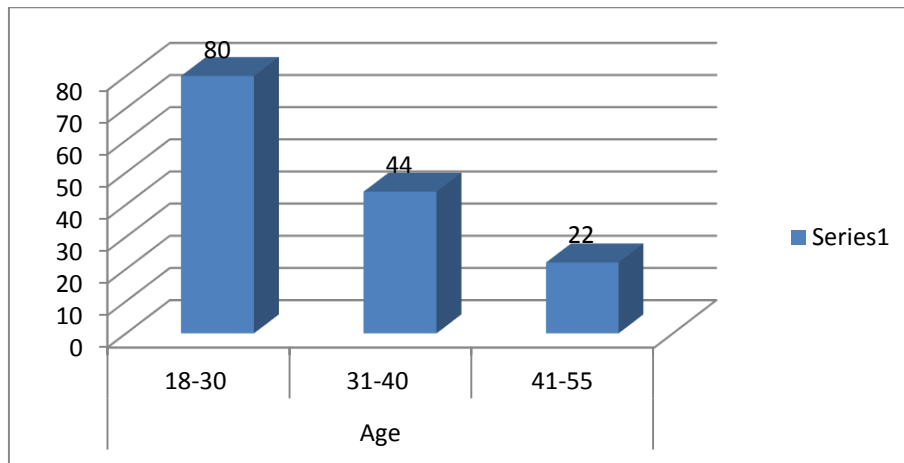

Chart: 1

Chart-1 shows that 80 numbers of respondents belong to 18-30 age group followed by 44 belong to 31-40 and 22 belong to 41-55.

Table: 2

Variables	Categories	Number of Respondents and percentage	Number of Respondents and percentage
Gender	Male	78	53.42
	Female	68	46.58
Total		146	

Table -2 represents number of respondents and percentage of respondents belonging to different categories of respondents on the basis of gender. The maximum numbers of respondents were male which was 78 and 53% of total respondents. Female respondents were 68 and it was 47% of the total respondents.

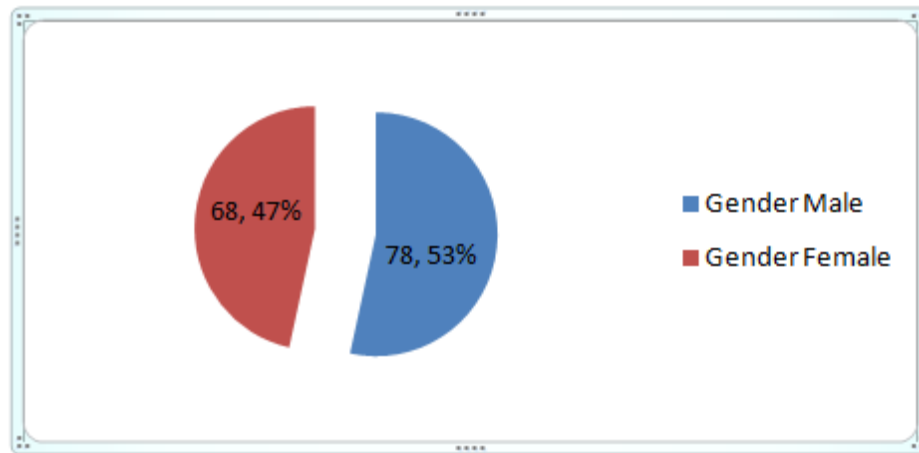

Chart-2

Chart-2 depicts that 53% of respondents were male and 47% of respondents were female.

Table: 3

Variables	Categories	Number of Respondents and percentage	Number of Respondents and percentage
Education	Undergraduate	84	57.53
	Postgraduate	40	27.40
	Others	22	15.07
	Total	146	

Table -3 represents number of respondents and percentage of respondents belonging to different categories of respondents on the basis of education. The maximum numbers of respondents were undergraduate which was 84 and 58% of total respondents.

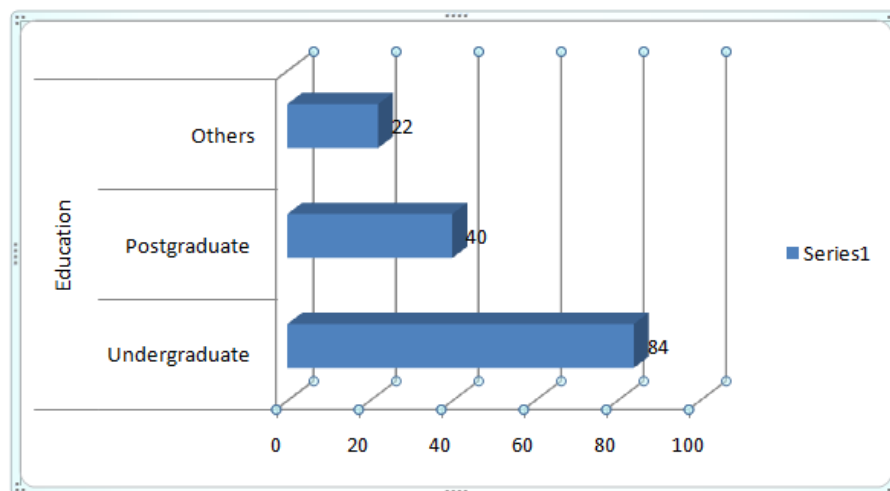

Chart: 3

Chart-3 depicts that 84 respondents were under graduate, 40 are postgraduate and 22 are having other educational background.

Table: 4

Variables	Categories	Number of Respondents and percentage	Number of Respondents and percentage
Occupation	Employed	36	24.66
	Business	32	21.92
	Students	62	42.47
	Other	16	10.96
Total		146	

Table -4 represents number of respondents and percentage of respondents belonging to different categories of respondents on the basis of occupation. The maximum percentage of respondents were students i.e., 42% followed by employees 25%.

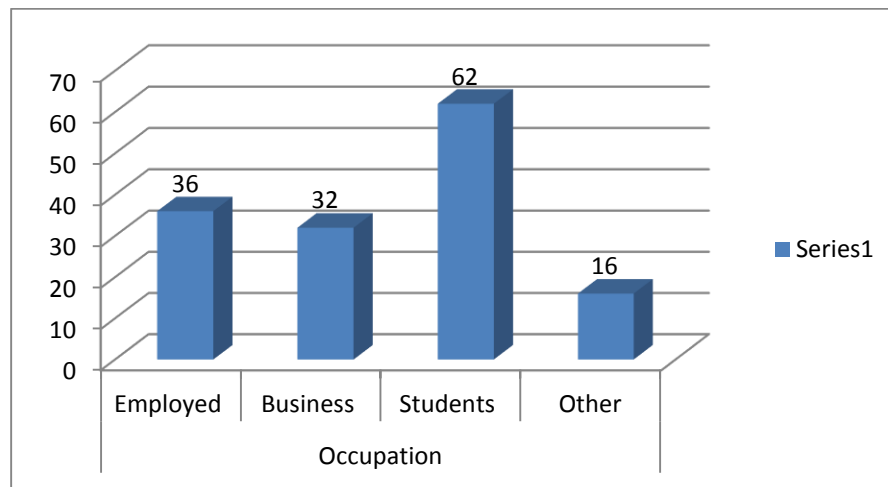

Chart: 4

Chart-4 depicts that 62 respondents were students, 36 are employees, 32 are businessmen and 16 are having other occupation.

Table: 5

Variables	Categories	Number of Respondents and percentage	Number of Respondents and percentage
Income	Below 50000	16	10.96
	50000-1lacs	78	53.42
	1-2 lacs	20	13.70
	Above 2 lacs	32	21.92
Total		146	

Table -5 represents number of respondents and percentage of respondents belonging to different categories on the basis of income. The maximum percentage of respondents (53%) were having income between 50000-1lacs followed by 22% respondents belong to above 2 lacs of income category.

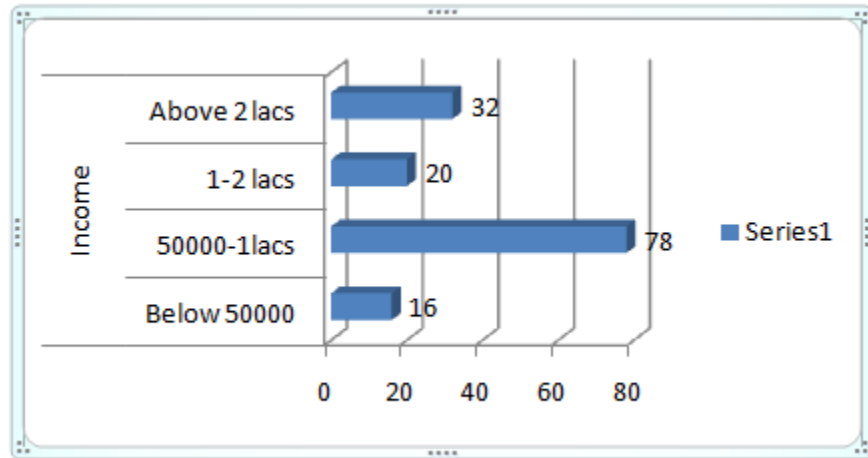

Chart: 5

Chart-5 depicts that 78 respondents were having income 50000-1lacs, 32 were having income above 2lacs, 20 were having income between 1lacs to 2lacs and 16 were having income below 50000.

Table: 6

Variables	Categories	Number of Respondents	Percentage
Website you like to buy from	Flipkart	64	43.84
	Amazon	48	32.88
	Myntra	22	15.07
	Others	12	8.22
Total		146	

Table -6 represents number of respondents and percentage of respondents like to buy from different types of e-commerce site. The maximum percentage of respondents (44%) said that they like to buy from Flipkart followed by 33% of the respondents said they like to buy from Amazon.

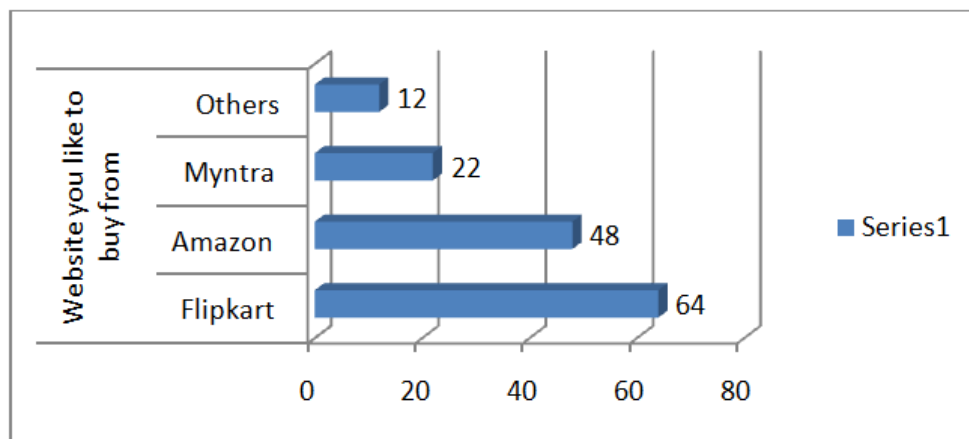

Chart: 6

Chart-6 depicts that 64 respondents like to buy from Flipkart, followed by 48 respondents like to buy from Amazon. 22 like to buy from Myntra and 12 like to buy from other e-commerce site.

ANALYSIS OF CUSTOMER'S OPINION ON DIFFERENT FACTORS

Table: 7 Factors Opinion of Respondents

Factors	Highly satisfied	Satisfied	Neutral	Dissatisfied	Highly dissatisfied
Quality of goods	44	60	18	18	6
Delivery time	65	46	18	11	6
Convenience	32	73	28	6	7
Easy return	24	80	13	21	8
Saves Time	43	62	23	11	7
Multiple brands available	62	54	21	5	4
Security of payment	46	37	23	22	18

Table -7 is a cross table of factors that drives the customers to buy from different e-commerce site and opinion of customers (Highly satisfied to highly dissatisfied). It can be seen that most of the customers are satisfied with their preferred e-commerce site in regard to these factors.

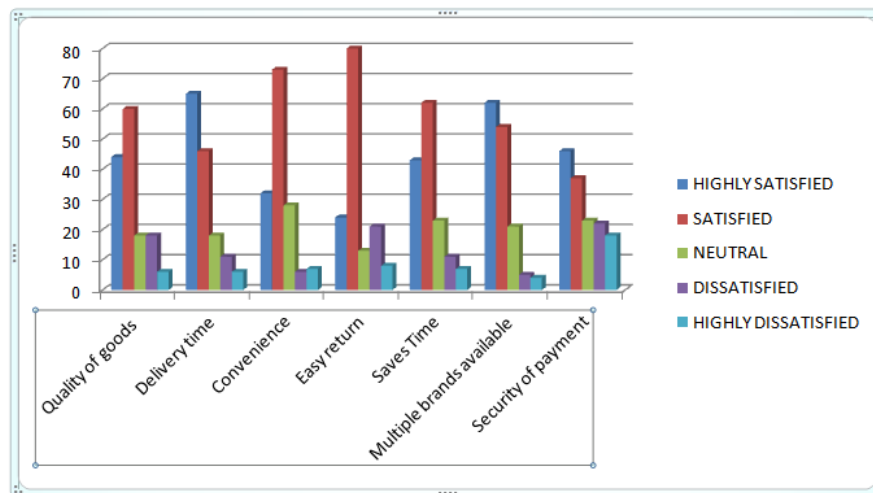

Chart: 7

Chart -7 shows that a large number of respondents have the opinion that they are highly satisfied and satisfied with the e-commerce site with regard to these factors mentioned.

Chi-square test analysis

H0: The opinion of the customers is the same with regard to all the factors.

H1: The opinion of the customers differs with regard to all the factors.

Table: 8 Cross table for product features and opinions of customers for chi-square test

Factors	Highly satisfied	Satisfied	Neutral	Dissatisfied	Highly dissatisfied
Quality of goods	44	60	18	18	6
Delivery time	65	46	18	11	6
Convenience	32	73	28	6	7
Easy return	24	80	13	21	8
Saves Time	43	62	23	11	7
Multiple brands available	62	54	21	5	4
Security of payment	46	37	23	22	18

Table: 9 Expected frequency with p value for chi-square test

1. Product Features	Highly Satisfied	Satisfied	Neutral	Dissatisfied	Highly Dissatisfied
Quality of goods	45.14	58.85	20.57	13.42	8
Delivery time	45.14	58.85	20.57	13.42	8
Convenience	45.14	58.85	20.57	13.42	8
Easy return	45.14	58.85	20.57	13.42	8
Saves Time	45.14	58.85	20.57	13.42	8
Multiple brands available	45.14	58.85	20.57	13.42	8
Security of payment	45.14	58.85	20.57	13.42	8
p value		1.7717E-10			

Table -8 is a cross table of factors considered for e-shopping and opinions of the customers. Table- 9 shows expected values and the p value for the chi-square test. The p value is 0.000, which is less than 0.05. So we can reject the null hypothesis and can conclude that the opinion of the customers differs with regard to all the factors. Opinions are not the same for online shopping with regard to different factors considered for online shopping.

CONCLUSION

Online shopping has become a daily part of our lives as it is more and more convenient. Customers are searching out for timely services, good quality of products, good customer service and also security and privacy in payment method. This study shows that the maximum number of respondents belongs to the age group of 18-30 which is 55%. The maximum numbers of respondents were male which was 78 and 53% of total respondents. Female respondents were 68 and it was 47% of the total respondents. 84 numbers of respondents were under graduate and it was 58% of total respondents. The maximum percentage of respondents were students i.e., 42 % followed by employees 25%. 53% respondents were having income between 50000-1lacs followed by 22% respondents belong to above 2 lacs of income category. The maximum percentage of respondents (44%) said that they like to buy from Flipkart followed by 33% of the respondents said they like

to buy from Amazon. We can conclude that the opinion of the customers differs with regard to all the factors. Opinions are not the same for online shopping with regard to different factors considered for online shopping.
